

Tenaska and West Texas: A Powerful Partnership Now and for the Future

TENASKA is using West Texas ingenuity and pioneering technology to provide cleaner energy for Texans.

The Tenaska Trailblazer Energy Center in Nolan County will be a cutting-edge coal-fueled power plant that would be among:

- The *first* designed to capture 85 to 90% of its carbon dioxide on a large scale.
- The *first* in Texas to reduce its water use by more than 90%.
- The *first* to give a steady supply of carbon dioxide to business-savvy oil producers in the Permian Basin, who use it to boost oil production.

With Tenaska's experience and innovation come jobs, now and for generations.

TENASKA® TRAILBLAZER ENERGY CENTER
