

Tenaska Trailblazer: Cleaner Energy, Now and for the Future

Tenaska repeatedly ranks among the best energy companies in the nation for controlling emissions at its operating power plants.

The **Tenaska Trailblazer Energy Center** is being designed to show the world how to produce cleaner energy from fossil fuels. The cutting-edge plant will:

- Capture 85 to 90% of the carbon dioxide it creates.
- Reduce its water use by more than 90%.
- Meet all federal and state health-based standards and monitoring requirements.
- Keep emissions to a small fraction of those released by older, existing coal plants.
- Recycle as much ash as possible for use in construction materials.

With Tenaska's experience and innovation, comes safe and responsible electricity production, now and for generations.
